Experience

AI / Full Stack Engineer (GenAI) Jan 2025 – Present
Legalwiz.in *Ahmedabad, Gujarat*

- Shipped production GenAI features (document analysis, clause extraction, QA, summarization) on OpenAI GPT-4o and Anthropic Claude APIs with structured outputs, cutting manual legal review effort by 40%.
- Built an end-to-end RAG pipeline over the company's legal corpus: chunking, embeddings, pgvector/FAISS vector search, hybrid retrieval with re-ranking and prompt engineering, delivering grounded answers with source citations.
- Developed a conversational legal assistant (chatbot) with LangChain/LangGraph using multi-turn memory, tool calling and guardrails for safe, context-aware responses over client documents.
- Built a call-summarization pipeline (Whisper speech-to-text + LLM summarization) that surfaces key points and action items, deployed as event-driven AWS Lambda/SQS workers with CloudWatch monitoring.
- Productionized AI pipelines with LLM evaluation sets, prompt versioning, response caching and model routing to cut latency and token cost; documented designs and mentored developers on GenAI best practices.

Software Engineer Jan 2024 – Jan 2025
Ridgeant Technologies *Ahmedabad, Gujarat*

- Built Python/PySpark data pipelines with integrated LLM-based processing for analytics and ML workloads across PostgreSQL, MongoDB and Redis, with Parquet outputs ready for Snowflake/BigQuery, improving data throughput by 30%.
- Designed REST, GraphQL and WebSocket APIs in Node.js/NestJS with TypeScript, reducing backend response times by 25% and achieving a 95% on-time delivery rate through direct client collaboration.
- Led technical design sessions and code reviews under Agile SDLC, delivering a modular, well-documented codebase that improved team velocity and stakeholder alignment.

Associate Engineer Aug 2022 – Dec 2023
Mobio Solutions *Ahmedabad, Gujarat*

- Containerised a Python Frappe app with Docker and built Node.js/Express REST services with JWT/OAuth2 security and Razorpay payment gateway integration, reducing environment setup time by 50%.

Projects

Smart Query | *Python, LangChain, RAG, LLMs, PySpark, Apache Hudi*

- Built an LLM-powered natural-language-to-query tool (text-to-SQL/NoSQL) across PostgreSQL, MySQL, MongoDB and Cassandra using RAG-based schema retrieval, improving retrieval speed by 35%.
- Engineered LLM and PySpark query pipelines with Hudi/Parquet storage for multi-source retrieval, boosting integration by 40% and cutting query processing time by 50%.

Central Perk | *React, Node.js, Firebase, Stripe, Docker*

- Built a full-stack web app (REST API, Firebase backend, React frontend, Stripe payments) with a user-centric interface that lifted retention by 25% and conversion by 15%.

Education

New LJ Institute of Engineering & Technology
B.E in Computer Science - AI & ML Specialization CGPA: 9.6

Technical Skills

GenAI / LLMs: OpenAI GPT-4o, Anthropic Claude, Hugging Face Transformers, RAG, Prompt Engineering, Function Calling, LangChain, LangGraph, Embeddings, Vector Search (pgvector, FAISS), Whisper, LLM Evaluation
ML / Deep Learning: PyTorch, TensorFlow, scikit-learn, CNNs, Transformers, LoRA Fine-tuning, OpenCV
Languages: Python, TypeScript, JavaScript, SQL, NoSQL, C/C++
MLOps & Cloud: AWS Lambda, Bedrock, SageMaker, SQS, CloudWatch, CodeDeploy, Docker, CI/CD, MLflow
Backend & Data: Node.js, NestJS, FastAPI, GraphQL, React, Apache Spark, PostgreSQL, MongoDB, Redis
